

Figure 1. Schematic representation of the experimental design. The figure shows the sequence of events in the experiment. The participant is first asked to read the instructions and then to perform the task. The task is divided into two parts: a pre-test and a main test. The pre-test is used to determine the participant's baseline performance. The main test is divided into two conditions: a control condition and an experimental condition. The control condition is used to compare the participant's performance to a baseline. The experimental condition is used to test the effect of the intervention. The participant's performance is measured at the end of each condition. The results are then compared to the baseline and to the control condition.

ID Number: 117157

1. The name of the corporation is Transcontinental Title Company
