

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the intervention group. The control group received a standard curriculum, while the intervention group received a curriculum that included a module on the effects of alcohol on the body. The subjects were then divided into two subgroups: the control subgroup and the intervention subgroup. The control subgroup received a standard curriculum, while the intervention subgroup received a curriculum that included a module on the effects of alcohol on the body. The subjects were then divided into two subgroups: the control subgroup and the intervention subgroup. The control subgroup received a standard curriculum, while the intervention subgroup received a curriculum that included a module on the effects of alcohol on the body.
